Mechanism screening: evidence of effects, not evidence of novelty
A: future worst-case age
Error radius
Prediction step
Known current age
Uniform
B: joint vs state/disturbance split
Count
Support-radius reduction (%)
C: robust feasible grid samples
Feasible (%)
exact
horizon
uniform
box
C: standard dual bound
Median absolute gap
Iteration budget
D: active range disambiguation
Worst remaining hypotheses
Range-noise radius
free
no_lateral
E: same common error
Relative-error radius
Common bias radius
Joint
Independent
